GLOUCESTERSHIRE RAILWAYS

Colin G. Maggs

GLOUCESTERSHIRE is a county rich in important railway features. There was the dense network of early railways in the Forest of Dean; the Bristol & Gloucestershire/Avon & Gloucestershire Railway which had a steam locomotive as early as 1835; another early line was the Cheltenham & Gloucester Tramway, while the 4,162yd long Severn Bridge was the longest in England. Furthermore, the county had three principal railway tunnels: the Severn – for many years the world's longest underwater tunnel – Sodbury and Sapperton.

Colin Maggs, the renowned expert on railway history, tells the fascinating tale of the railways and the impact they had on the lives of everyone in the county. The nostalgic branch lines with their small local trains and the main lines with their thundering expresses, are all part of a rich heritage which is explored in an expert text and in more than two hundred evocative images to present an absorbing view of Gloucestershire's recent past.

ABOUT THE AUTHOR

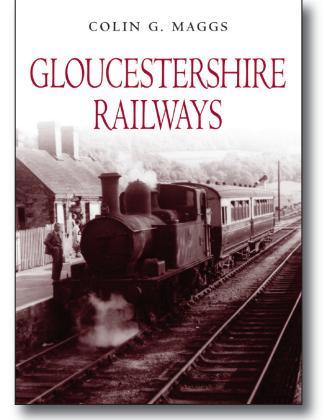

Colin G. Maggs has published more than 70 books to date, has written countless magazine and newspaper articles and has appeared frequently on radio and television. Mr Maggs was awarded the MBE in 1993 for services to railway history and was awarded an honorary MA by the University of Bath in 1995.

4-6-0 No 5919 Worsley Hall hauls a banana train through New Passage Halt 28 September 1959.

2 How a Railway was Created

IN TILE sintenenth centrary, businessmen and landowners wishing to improve trade, increase the value of their property and invect their cash profitably, might propose a scheme for linking two places by a railway. The way they went about such a scheme followed a general pattern which and escribed once and serve to eith the stop of the creation of almost any railway in Gloucestershire. Several meetings would be called in the locality and in Gloucestershire. Several meetings would be called in the locality and pracided that sufficient financial support was promoted, a bill would be placed before Parliament, itself often proving an expensive process. Committees of the houses of Commons and Lords received endense for and against the proposed line. It both houses passed the bill it became an Act of Parliament and the promoting company was the leggly entitled to raise a stipulated sum of morey to purchase land and build the railway between the worknown places. Selfore ging to Parliaments astroyet would have drawn plans. Ideally, a line would be straight, level, and pass through or close to chief settlements, yet using

chief sertlements, yet using cheeper, rather than expensive land. If tunnels, cartings and embatikments were required, the surveyor would endeavour to make sure retat soil exeavaned could be used in a nearby embatikment. These plans, known as Deposited Plans, were placed with the local authority and Parliament. After the passing of the Act, with at least some of the capital raised, a contractor had to be found to

carry out the work; those companies with less money would seek a contractor willing to work for shares rather than for cash.

Work usually began with the ceremonial turning of the first turf, a highly
